Skills

- JavaScript | TypeScript | Jest | SASS | TailwindCSS | PostgreSQL | Node | Express | Prisma
- React | Next.js | GraphQL | Redux | React Native | Figma | UI/UX | Testing | AWS | Monorepo

Experience

- **Software Engineer** **Viewcy** **Jan 2025 - Current**
 - Built "Fool's Journey" from scratch — a full-stack SaaS platform using Next.js 15, TypeScript, Convex, and React 19 that delivers automated, personalized tarot experiences to event ticket purchasers via webhook-driven email automation.
 - Implemented location-based event discovery for the Viewcy mobile app (React Native/Expo), integrating Google Places API with session token management and GPS-powered "near me" filtering.
 - Built an automated weekly sales reporting system integrating with Viewcy backend API, calculating financial metrics (gross/net revenue, Stripe fees, refunds) and delivering scheduled email reports via Convex cron jobs and Resend.
 - Established QA automation infrastructure using Jest (unit) and Cypress (e2e), implemented CI/CD testing pipelines via GitHub Actions for automated quality gates on PRs.
 - Shipped Tap to Pay feature for the check-in app, enabling event staff to accept contactless payments directly from iPhones, eliminating the need for dedicated payment hardware.
 - Tech used: TypeScript, Next.js 15, React Native, Expo, Convex, Jest, Cypress, GitHub Actions, React Query, Jotai.
- **Software Engineer** **IgniteDev** **Jan 2024 - Jan 2025**
 - Founded a startup to build products that positively impact people's lives. Example products: Selah (React-Native meditation app) and a Chrome extension that supercharges YouTube experience with features such as Summary, Transcript, Chat feature, and more. It is still in the active development phase.
 - Implemented a collaborative whiteboard application, Collab Board, with real users creating sketches together. (<https://collabboardx.vercel.app>)
 - Worked on a frontend framework, Ignite-fwk, to expound to developers how they work.
 - Participating in writing technical articles.
 - Tech used: TypeScript, Next.js, ConvexDB, Node, TailwindCSS, React-Native, Plasmio.
- **Software Developer** **Castynet** **May 2023 - Jan 2024**
 - Piloted the successful migration of the Digikids Web Platform's front-end production codebase from JavaScript to Typescript, resulting in more than 80% reduction in bug reports and 2x faster issue resolution time.
 - Engineered an automated certificate issuance system for learners by integrating a course certificate generator module. The impact was measured by a significant decrease in manual interventions and 3x faster certificate delivery.
 - Implemented the majority of the user-facing side of the Digikids E-Learning Platform from a design file, bringing about an enhanced user interface and user satisfaction.
 - Instructed 20+ students in multiple programming courses, who got to improve their coding and analytical skills through projects, achieved by delivering engaging lessons.
 - Continuous integration/Deployment Pipeline Integration via Vercel, pull requests, and code reviews.
 - Tech used: TypeScript, Next.js, Firebase, NeonDB, SCSS, Node.
- **Product Support Staff** **Youversion** **May 2023 - Jan 2024**
 - Collaborated with the YouVersion team, an app with 100+ million users, to supply technical support and resolve bug issues, resulting in a more than 50% increase in user satisfaction.

- Worked on translation team to translate users' responses to languages catered to the diversity of daily users, enhancing user engagement by more than 15% from non-English speaking regions.

Projects

- **Recap**
 - A React app in which users can get up-to-date summaries of their articles and blogs, by using the article's URL link.
 - **GitHub Link:** <https://github.com/lan-Chege/Recap>
 - **Application link:** <https://recap-article.vercel.app/>

Education

Bachelor of Science

Mount Kenya University

- **Computer Science**
 - Core Units: Computer Architecture | Structured Programming | Systems Analysis and Design | Software Engineering | AI
